Career Objective

I'm currently working as a junior frontend developer, passionate about creating clean and responsive websites. My goal is to become a skilled full stack developer and work on meaningful, real-world projects that make a difference.

Skills

- Front-end: HTML, CSS, Tailwind CSS, Bootstrap, JavaScript, React.js, REST API Integration
- Back-end: Node.js, Express.js, Mongoose, MongoDB, Basic CRUD Operation, JWT, Firebase
- Tools: Git & GitHub, Vercel, Netlify, Figma, Photoshop, VS Code, Postman

Experiences

Creative IT Institute, Dhaka | 3 Months (2024, Internship)

- Worked on the development and enhancement of web applications using modern frontend technologies.
- Gained hands-on experience with React, JavaScript, and state management in real-world projects.

Projects

Foodie's Hub

A Full-Stack recipe management and sharing platform where users can explore, share, and manage their favorite recipes with ease. Includes user authentication, recipe creation, and dynamic data management

Key Features:

- User authentication using Firebase for secure login and user management.
- (CRUD) functionality for recipes with server-side integration.
- Dynamic dashboard with real-time analytics for users to track their recipes and activity.

Rent Ride

A car rental web application where users can create accounts, add cars for rent, book vehicles, and explore available cars using dynamic filters and sorting.

Key Features:

- User authentication login and registration via Firebase for secure access.
- Car management add, update, delete, and modify details of listed cars.
- Car booking users can book cars, update booking dates, or cancel their bookings.
- Search cars, sort by price (low-high / high-low).
